Where is the battery on the roomba 690

Newer Roomba robot vacuums, regardless of price, are equipped with a Li-ion battery. These batteries are lighter and last longer. However, that longevity isn't indefinite, and you'll need to replace it if you use it long enough. I'll share with you how to change a Roomba 690 battery in this tutorial. Please note the steps here also apply to the Roomba 614 and 675 since they share the same components and architecture. Tools you'll need Rubber Gloves: So you won't smear fingerprint marks on the robot components. Philips screwdriver: A regular Philips head will do for removing the base plate. Replacement Roomba 690 battery: Get an original or a suitable OEM replacement. Related: How to replace Roomba 980 battery Steps to change a Roomba battery One thing I like about Roomba products is its modular design. You can replace almost any component if you're the type who likes to DIY. The good thing about the 690 is the battery is easily accessible. Step 1: Remove the dust bin and flip the robot over Place a clean towel under the robot, remove the dust container, then flip the robot over. The towel acts as a cushion to prevent scuffing on the surface. Also, take out the side brush by removing one screw that holds it in place. You need to remove the bin and side brush, so it's easier to remove the base plate in the succeeding steps. Step 2: Loosen four screws Use the Philips screwdriver to unfasten the four screws, as shown in the photo above. There's no need to remove the screws. Loosen it enough until you can remove the base plate. Step 3: Remove the base plate Once you've loosened the four bolts, gently lift the base plate. If there's a snag, loosen it a bit more until the cover comes off. You'll see the battery right in the middle, above the main brush. Pull out the battery using the two black holders on each side. Here's how the battery looks up close. Step 4: Attach the new battery Get the new battery and place it over the battery port. Step 5: Reattach the base plate Reattach the base plate and tighten the four screws. Don't overdo it as you may strip the screws. Step 6: Reattach dust bin and side brush After step 5, you'll need to reattach the dust bin and side brush. Congratulations, you've successfully replaced the Roomba 690 battery. What's the best Roomba 690 battery? Given a choice, I'd always go with an original Roomba battery, which will cost more than OEM replacements. But if you're willing to try, there are lots of options available. Some have larger capacities that should enable your Roomba 675 or 690 to run longer than an original. The issue will be longevity if these replacement parts can hold up over the long haul. One way to gauge is by looking at consumer reviews. I'd go with a brand with high 4+ star ratings with lots of entries. Also, there will be slight variations with the 614, 675, and 690 battery. So make sure that it is compatible with the Roomba you have. Some batteries that are compatible with the Roomba 675 may not fit on the 690 like this Nastima XLife battery. Always go for a Li-ion over a NiMH battery as it lasts longer and doesn't suffer from fading issues. Brand new is always better than a renewed battery since this part is consumable and a renewed part may not last as long (I wouldn't take the risk). When you notice that the cleaning cycles of your Roomba start being less effective, it is possible that your battery is beginning to show signs of exhaustion. For it, the Roomba has a procedure of regeneration of their batteries that also works with our compatible batteries. This procedure is named in some web sites as the reset of the battery. If we make this simple process occasionally, we will achieve that the battery recovers and that the useful life of our battery gets longer considerably. Steps to follow Turn on your Roomba by pressing the button "Clean" Keep pressed during 10 seconds the buttons "Spot" and "Dock" that are placed above and under the button "Clean" Release the buttons at the same time and you will hear the typical sound of beginning of the Roomba Put the Roomba to load for at least 12 hours or until it puts in green on the button of "Clean" It's simple. Do it if you have noticed a decrease in the cleaning cycles of your Roomba. We you want to remember that it is very important to keep the rollers of the Roomba clean, since the dirt does that it cost to move them and consume much more energy than necessary. Our advice is that you clean the brushes of your Roomba at least once per week and the whole robot once a month. Thus, you will achieve that it lasts very much more time working perfectly without giving you any problems. To see also our advices to prolong the useful battery life.
